🌐 [linkedin.com/in/mohd-asif-3a159913b](https://www.linkedin.com/in/mohd-asif-3a159913b)

Software Engineer with 5+ years of experience building enterprise-grade web and desktop applications using React.js, Next.js, TypeScript, Electron.js, Redux, and FastAPI. Experienced in designing scalable Multi-Tenant SaaS ERP, CRM, POS, E-commerce, Government HRMS, and Healthcare platforms with secure REST API integrations, role-based access control, real-time features, and offline data management using IndexedDB.

Developed end-to-end business solutions including Enterprise CRM, Multi-Store Management, POS with QR/Barcode integration, Dynamic Invoice Template Designer, Support Ticket Systems, Document Management, Interactive Dashboards, and Notification Systems. Passionate about scalable architecture, reusable component design, application performance, and delivering production-ready software that solves real-world business challenges.

PROFESSIONAL EXPERIENCE

03/2023 – Present
Sonipat

Apexpath Pvt Ltd

Software Engineer

Working as a **Software Engineer** and **Team Lead** focused on full-stack web and cross-platform application development. Leading development and mentoring teams for enterprise-grade applications including the **Employee Management System (EHRP Web) for the GUAM Government** using React.js, Redux, Swagger APIs, FastAPI, and SQL. Responsible for coordinating with cross-functional teams, managing development workflows, reviewing implementations, and ensuring timely delivery of scalable, maintainable, and secure solutions.

Building **Hospital Management Systems, ERP platforms, E-commerce applications, POS/Billing systems, and desktop applications** using Next.js, Electron.js, and modern frontend technologies. Developed complete **POS workflows with QR/Barcode** scanner integration for instant product scanning and automated billing entry, along with thermal printer integration for invoice and receipt generation. Implemented offline/local data storage using **IndexedDB** to improve desktop application reliability and performance.

Worked extensively on healthcare platforms featuring doctor/patient portals, appointment booking systems, medicine tracking, patient history management, PDF slip generation, analytics dashboards, and video consultation modules. Also experienced in developing secure document/file upload systems, media handling, signature management, and role-based dashboards for enterprise applications.

Responsible for high-performance REST API integration, FastAPI endpoint development, state management, application optimization, and reusable component architecture.

Focused on writing clean, modular, and production-ready code while actively troubleshooting, debugging, and resolving complex technical issues. Strongly committed to delivering high-quality software solutions that balance business requirements, scalability, security, and user experience.

04/2022 – 04/2023
Noida

Appsums Pvt Ltd

Front End Developer

Worked as a Frontend Developer specializing in React.js for dynamic and interactive web applications. Contributed to the development of Turegu, an E-commerce platform built using React, Node.js, MongoDB, and Firebase. Developed responsive UI components, integrated RESTful APIs, and ensured seamless data flow using state management. Focused on improving user experience through clean and optimized code. Collaborated with designers and backend teams to implement new features and maintain existing ones. Involved in debugging, testing, and resolving issues across multiple devices and browsers. Used Git for version control and participated in Agile development processes.

08/2018 – 12/2021
Noida

Virtual Studio Pvt. Ltd

Web Developer, Support Engineer

Served as a Support Engineer and Web Developer, managing Adobe Connect platform support for Novartis as a Team Lead. Responsible for organizing, monitoring, and supporting online meetings, webinars, and virtual training sessions. Provided real-time troubleshooting and end-user support for platform-related issues. Worked on HTML-based website development and optimization tasks to improve performance and user accessibility. Ensured smooth coordination with internal teams to deliver uninterrupted digital communication services. Handled ticketing systems, client communication, and provided timely resolutions to technical issues.

PROJECTS

11/2024 – Present

Sidhahisab – Admin Panel & Multi-Tenant ERP

Advanced SaaS ERP Platform with Full Admin Panel, Automation & Real-Time Insights
SidhaHisab is a multi-tenant SaaS ERP and e-commerce platform built for Indian SMBs, integrating billing, inventory, CRM, dashboards, task management, expense tracking, and document management into a unified web and desktop application. Developed a responsive, role-based application using **React.js, Next.js, Electron.js, Redux, and REST APIs**. Built the **complete System Admin Panel** from scratch, including tenant provisioning, user & role management, platform reviews, and support administration. Developed the **complete Enterprise CRM module**, covering Customer Management, Lead Management, Contact Management, Deal/Pipeline Management, Follow-ups, Activity Timeline, Notes & Communication History, and Reports & Analytics. Implemented a **dynamic Invoice Template Designer** for creating and managing customizable invoice layouts. Built a **Multi-Store Management System** with store-wise dashboards, sales, purchase, inventory, payment & business summaries, store comparison, cross-store inventory transfers, purchase requests, and inter-store order workflows. Implemented real-time notifications using WebSockets, secure document uploads, **PDF/video attachments**, and a two-way Support Ticket System. Built reusable components, optimized Redux state management, and integrated secure REST APIs to deliver a scalable enterprise-grade SaaS platform.

04/2023 – Present

Employee Management System HR PR (EHRP Web)

Government-Grade HR & Payroll Platform with Multi-Level Access Control
Built the frontend for a secure, role-based Human Resource and Payroll Management System used by Guam government agencies. Developed interfaces for Admins, Directors, and Certifying Officers using React.js and Redux, with strict department-level permissions and access control. Implemented end-to-end HR & Payroll features including salary increment workflows, employee master records, job history tracking, GG-1 processing, and multi-step approval flows. Handled form validations, secure API integration, and user-specific restrictions to ensure confidentiality and compliance. The system digitized major government HR operations—such as employee updates, job changes, salary adjustments, and record management—resulting in faster, accurate, and fully trackable HR processes

11/2025 – Present

ReqTrack - Requirements Management System

Enterprise React application for software requirement lifecycle management with version control and client collaboration.

Led end-to-end design and development of an enterprise React-based requirements management system, owning architecture, UI/UX, and implementation. Built Git-style version control with diff and rollback, role-based access control, and a secure client approval portal without account creation. Designed bulk requirement creation workflows, markdown-based specification editor, and a responsive real-time dashboard. Delivered measurable impact by reducing project setup time by **60%**, eliminating scope creep through approval workflows, and improving client collaboration, reducing miscommunication by **40%**.

06/2024 – 11/2024

HealthBridge

A Complete Hospital Management System with Patient & Doctor Portals

Developed the frontend for a comprehensive Hospital Management System built with React.js and Redux, supporting both doctor and patient logins. Implemented modules for appointment booking, doctor availability, medicine tracking, patient history, and digital receipt/slip generation (PDF). Created responsive, role-based forms and pages, integrated secure REST APIs via Axios, and tested endpoints using Postman & Swagger. Added features like doctor availability by date and area, full patient medical history, appointment schedules, and data charts for analytics. The system also included a video consultation module, enabling remote doctor– patient interactions. Focused on clean UI, mobile responsiveness, and secure access control, helping clinics digitize their workflows and significantly improve the patient experience.

09/2025 – 01/2026

LabSync – Laboratory Management System

LabSync – End-to-End Lab Workflow Management System

Developed LabSync, a full-stack Laboratory Information Management System (LIMS) for pathology labs, implementing patient management, test registration, automated reporting, and billing. Designed a scalable platform to digitize lab workflows, enhancing efficiency, data accuracy, and secure sample tracking

AWARDS

29/07/2026

Founding Commitment Award

ApexPath Pvt. Ltd.

Received the Founding Commitment Award in recognition of my longstanding commitment, consistency, and dedication to ApexPath since the beginning of the company's journey. Honored as an early team member for contributing to the company's growth and long-term success.
